

How To Read Your Water Meter

Reading your water meter is not a difficult task. To determine your water usage, read your meter as you would an odometer -- from left to right -- and simply report the number listed. Remember, your water consumption is measured in gallons. An answering service is available 24 hours a day to record your meter readings. If your bills are consistently estimated, please call our office at 732-566-2534 so that we may discuss some alternative means of obtaining an actual meter reading.

Determining How Much Water You Actually Use

In order to determine your average daily water use or to check your appliance usage, you can read your meter on an hourly, daily or weekly basis. Simply record your meter reading at the beginning of a measurement period and again at the end of the period. The difference between these two meter readings will be the water used during the period. This audit will provide useful information as to your appliance usage and your water use habits.

How To Check For Leaks

Every drop counts! Here's a simple process you can use to detect leaks that may exist anywhere in your home or business.

1. Turn off all water inside and outside, making sure that no one uses water during the test period.
2. Locate leak indicator on meter, usually appears as a red plastic indicator on your meter itself. See below for examples.
3. If leak indicator is moving at all, there is a leak somewhere. ***Please Note:** * The customer is responsible for maintaining the interior plumbing system, including all pipes and plumbing fixtures.

Leaks inside your home or business can be very expensive and cause property damage. Please contact us if you need assistance in determining if you have a leak, or if you have any questions regarding your water service.
